TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), Python, SQL (MySQL), HTML5/CSS3, Bash
Frameworks & Libraries: React.js, Node.js, Express.js, Tailwind CSS, Spring Boot, Three.js, MCP, Langchain, Asyncio
Developer Tools: Git/GitHub, Docker, Postman, VS Code, Linux/Unix
Databases & Caching: MongoDB, MySQL, Redis, Apache Kafka
Core Concepts: Data Structures & Algorithms, OOP, System Design, RESTful APIs

PROJECTS

- BaatCheet - Real-Time Chat App** | [Live Link](#) | *MERN, Socket.io, Redis, Docker* Feb. 2026 – Present
- Architected a scalable messaging platform supporting **500+ concurrent connections** using **Socket.io** for bi-directional communication.
 - Containerized the application using **Docker**, ensuring consistent environments across development and production and reducing setup time by **50%**.
 - Implemented **Redis** caching to store active user sessions and frequent chats, reducing database query latency by **40%**.
 - Secured file uploads via **Binary Signature Validation (Magic Numbers)**, preventing malicious file execution across **100%** of uploads.
- NetWatch - Global DDoS Tracker** | [GitHub](#) | *React, Node.js, Three.js, WebGL* Dec. 2025
- Engineered a real-time cybersecurity dashboard visualizing **10,000+ daily attack vectors** on an interactive 3D globe using **Three.js**.
 - Consumed **Cloudflare Radar API** data via **WebSockets**, achieving sub-100ms latency for live threat updates.
 - Optimized **WebGL** rendering performance, maintaining **60 FPS** even while rendering complex geospatial attack arcs.
- Geospatial Pathfinding Visualizer** | [GitHub](#) | *React, Leaflet, GIS, Algorithms* May 2026 – Present
- Led frontend team integration to architect an interactive routing engine, processing OpenStreetMap (OSM) GeoJSON into dynamic adjacency lists for multi-modal urban graph traversals.
 - Implemented and animated **A* Search (Haversine heuristic)**, **Dijkstra's**, and a custom **Bidirectional Near-Linear SSSP** core frame-by-frame using coordinate edge-batching.
 - Optimized performance using Leaflet's **HTML5 Canvas rendering** and asynchronous graph rebuilding, maintaining **60 FPS** across 10,000+ active road segments without reprojection drift.
- Taskthon Studio** | [GitHub](#) | *Python, LangChain, MCP, SQLite, Asyncio, Tkinter* May 2026
- Architected an asynchronous desktop workspace utilizing Anthropic's **Model Context Protocol (MCP)** to unify local database layers and external cloud APIs into a single agentic execution loop.
 - Engineered a dual-server backend runtime managing parallel **studio** connection channels, allowing a **LangChain** orchestrator to dynamically discover and call system tools with zero network overhead.
 - Implemented automated cross-platform workflows using the **Google Gmail API** and an integrated web scraping tool, enabling the AI agent to summarize inboxes, perform real-time Q&A, and extract tasks directly into an optimized **SQLite** database.
 - Designed a multi-threaded **Tkinter** graphical interface featuring transactional live-chat boxes and a responsive, auto-refreshing database viewer, ensuring smooth rendering at runtime during complex tool-calling sequences.

EDUCATION

LNCT-MCA <i>Master of Computer Applications (MCA)</i>	Bhopal, MP <i>Sep. 2024 – Jun. 2026</i>
BRABU <i>Bachelor of Computer Applications (BCA)</i>	Muzaffarpur, BR <i>Jun. 2020 – Dec. 2023</i>

CERTIFICATIONS

Java Programming I and II | *University Of Helsinki*
CS50P - Programming with Python | *Harvard University*

ACHIEVEMENTS & LEADERSHIP

Hackathon Competitor: Achieved a score of **2000 points in TCS HackQuest**, demonstrating practical skills in cybersecurity and ethical hacking.
Award Winner: Secured **3rd Place** at the National Mathematics Day intra-college hackathon, showcasing strong algorithmic problem-solving abilities.
Technical Mentor: Conducted a 2-day Java workshop for **200+ MCA students**, improving batch pass rates by facilitating peer learning.
